Model Answers in the Structure of Commerce aims to do the following: (a) to be a guide to students as to how to tackle questions in this particular subject; (b) to give some indication as to the length of answers and content an examiner would expect; and (c) to help students to appreciate the scope of the syllabus and also the type of questions likely to be set in examinations. The book begins with a discussion of how to answer examination questions on the Structure of Commerce. Subsequent chapters present questions relating to industry and commerce, types of business organizations, distribution methods, import and export procedure, foreign trade, the capital market, the banking system and methods of payments, transport, location of industry, insurance, consumer protection. Also provided are a selection of questions requiring brief treatment on a variety of subjects and questions relating to trade calculations. This book does not attempt to replace good textbooks on the subject of Commerce although much benefit will be derived from studying carefully the answers to the questions.

Agent-based modeling and simulation (ABMS), a way to simulate a large number of choices by individual actors, is one of the most exciting practical developments in business modeling since the invention of relational databases. It represents a new way to understand data and generate information that has never been available before—a way for businesses to view the future and to understand and anticipate the likely effects of their decisions on their markets and industries. It thus promises to have far-reaching effects on the way that businesses in many areas use computers to support practical decision-making. Managing Business Complexity is the first complete business-oriented agent-based modeling and simulation resource. It has three purposes: first, to teach readers how to think about ABMS, that is, about agents and their interactions; second, to teach readers how to explain the features and advantages of ABMS to other people and third, to teach readers how to actually implement ABMS by building agent-based simulations. It is intended to be a complete ABMS resource, accessible to readers who haven't had any previous experience in building agent-based simulations, or any other kinds of models, for that matter. It is also a collection of ABMS business applications resources, all assembled in one place for the first time. In short, Managing Business Complexity addresses who needs ABMS and why, where and when ABMS can be applied to the everyday business problems that surround us, and how specifically to build these powerful agent-based models.

Long-Term Solutions for a Short-Term World demonstrates the complexity of the challenges that poor countries face and introduces the readers to the concept and impact of participatory research for development. Participatory research requires researchers to work with communities, governments, and other relevant actors to deal with common problems. Finding solutions requires participants to reflect critically on the cultural, economic, historical, political, and social contexts within which the issue under investigation exists. The book contains a collection of essays from development researchers and professionals, each of whom is an activist who has made significant contributions to the struggles of the poor in their own societies. Essays are presented as case studies and, in each, the contributor explains the specific development problem, the paths followed to solve the problem, lessons learned as a result of the research, and the development challenges on the horizon in his field of research. Together, these essays present a fascinating picture of how some of today`s most pressing development issues are being dealt with through research, demonstrating how interdisciplinary and alternative approaches can be implemented in new and innovative ways.

Model Answers in Ordinary National Certificate Mathematics for Engineers presents a series of model answers that include all the topics covered by the many different syllabuses in Mathematics for the Ordinary National Certificate in Engineering. This book is composed 16 chapters; each chapter contains Worked Examples, Hinted Examples, and Further Examples. The opening chapters tackle the topics of logarithms, transformation and evaluation formula, progressions, binomial expansions, and algebraic equations. The succeeding chapters explore the topics of determination of laws, mensuration, equations and identities in trigonometry, solutions of triangles in trigonometry, and graphical solutions. The remaining chapters provides model answers for rates of change; maxima and minima; integration; areas, volume, centroids, and second moments of area; and Simpson`s rule. This book is directed towards mathematicians, and mathematics teachers and students.

This book constitutes the refereed proceedings of the 7th European Conference on Technology Enhanced Learning, EC-TEL 2012, held in Saarbrücken, Germany, in September 2012. The 26 revised full papers presented were carefully reviewed and selected from 130 submissions. The book also includes 12 short papers, 16 demonstration papers, 11 poster papers, and 1 invited paper. Specifically, the programme and organizing structure was formed through the themes: mobile learning and context; serious and educational games; collaborative learning; organisational and workplace learning; learning analytics and retrieval; personalised and adaptive learning; learning environments; academic learning and context; and, learning facilitation by semantic means.
