The ASCRS Manual of Colon and Rectal Surgery, Second Edition is designed to provide a rapid access pocket reference for residents, fellows, private clinicians, and allied health professionals caring for patients with colorectal surgical diseases. The Manual, abstracted from the ASCRS Textbook of Colon and Rectal Surgery, Second Edition, is intended to impart succinct, clinically relevant information for daily patient care. The chapters take an evidence-based approach and many provide ASCRS practice parameters. The contents are presented consistently, with concise overviews of the most clinically relevant topics. The disease chapters discuss etiology, anatomic considerations, patient evaluation, lab results, imaging, diagnosis and treatment. The surgical chapters address these same issues, in addition to discussion of minimally invasive versus open techniques, possible complications, and perioperative care. The Manual also includes anatomical and technique drawings, operative photos and algorithms. Concise yet comprehensive, The ASCRS Manual of Colon and Rectal Surgery, Second Edition is very useful for physicians and researchers dealing with diseases of the colon and rectum.

The research that has culminated in the publication being introduced (worldwide) save by one or two of this Manual was in the first place undertaken by private conifer enthusiasts. My own efforts at 1 for a new edition of the book *Manual of Cultivated Conifers* recording data at Devizes made possible the appearance in 1979 of a larger book: *Manual of Cultivated Conifers* by P. den Ouden and Dr B. K. Boom published in 1965. That book was clearly in effect a partial up-dating of the book published since 1753 was not entirely under revision, so the decision was made, and the stated objective, i. e. that the book to produce an entirely new work, with the present should serve as a basis for the international register title and with the following objectives. that was even at that date under consideration required a lot of space to be devoted to quite 1. To bring the taxonomy into line with current practice. Each of the authors of the *Manual of Cultivated Conifers* was well qualified for the task. P. den Ouden had been systematically collecting conifer to use. 2. To extend the species descriptions and make them (by the use of side headings) more easy to use. 3. To supply some form of 'keys'.
