Paper is three-quarters cotton, one-quarter linen. El periódico es tres cuartos de algodón, La ropa blanca de un cuarta parte. Paper says they ordered his pilot. El periódico dice que le encargaron su piloto.

The Canonical Papers of Steven C. Hayes is a compilation of his most pivotal articles written from 1982-2012. Through these selected papers, Hayes again revisits the theoretical struggles between behavioral and cognitive-behavior theories, taking us from the 1980s into present day, discussing the breakthroughs and follies. Using this as a focus point, he discusses the tradition of behavior analysis and its difficulties in addressing human language and cognition. Moving forward into the 90s, he chronicles the changes in a behavioral approach that emerge from a contextual perspective on human cognition, and lays out the foundation for a contextual behavioral science approach that he argues is more likely to lead to an understanding of human action and an alleviation of human suffering. Although the articles have previously been published, they have been edited and compiled ensure this branch of research is clear to the modern audience. The compilation was chosen by Dr. Hayes to enhance his vision for a functional contextual approach to complex human behavior.

This book constitutes the proceedings of the 11th International and Interdisciplinary Conference on Modeling and Using Context, CONTEXT 2019, held in Trento, Italy, in November 2019. The 20 full papers and 4 invited talks presented were carefully reviewed and selected from 31 submissions. The papers feature research in a wide range of disciplines related to issues of context and contextual knowledge and discuss commonalities across and differences between the disciplines' approaches to the study of context. They cover a large spectrum of fields, including philosophy of language and of science, computational papers on context-aware information systems, artificial intelligence, and computational linguistics, as well as cognitive and social sciences.

These companion volumes bring together research and theoretical work that addresses the relations between social context and the development of children. They allow for the in-depth discussion of a number of vital metatheoretical, theoretical, and methodological issues that have emerged as a result of increased investigation in these areas. For example: Which methodological and statistical procedures are appropriate and applicable to studies of social context and processes of development? Should the nature of social context be reconceptualized as something more than different levels of some social independent variable? Are theories of development that do not consider social context incomplete? Will the increasingly finer definitions of social context lead to extreme situationism and

contextualism? As developmental theory and investigation continues to address relationships between social and cognitive development, it becomes increasingly important that issues concerning social context be elaborated and discussed.

This book constitutes the thoroughly refereed post-proceedings of the Second International Workshop on Modeling and Retrieval of Context, MRC Edinburgh 2005. The 9 revised full papers presented were carefully selected and include extended versions of some presented at the MRC 2005 workshop. A major goal of the workshop was to study, understand, and explore the handling of context in IT applications. The papers illustrate the state of the art of context modeling and elicitation as well as identification and application of context in different application scenarios.

Originally published in 1989, this unique study into the severely retarded residents of a US state school argued for a change in the approach to developmental disability.

Carlota S. Smith was a key figure in linguistic research and a pioneering woman in generative linguistics. This selection of papers focuses on the research into tense, aspect, and discourse that Smith completed while Professor of Linguistics at the University of Texas at Austin. Smith's early work in English syntax is still cited today, and her early career also yielded key research on language acquisition by young children. Starting in the mid-1970s, after her move to UT, she embarked on her most important line of research. In numerous papers - the first of which was published in 1975 - and in a very important 1991 book (*The Parameter of Aspect*), Smith analyzed how languages encode time and how they encode the ways events and situations occur over time. Smith's work on the expression of time in language is notable because of its careful analyses of a number of quite different languages, including not only English and French, but also Russian, Mandarin, and Navajo. Inspired by a year in France in the early 1970s, Smith began to analyze the differing ways in which languages encode time and how they encode the ways events and situations occur over time. In doing so, she developed her signature 'two-component' theory of aspect. This model of temporal aspect provided an excellent framework for graduate students seeking to analyze the temporal systems of an array of languages, including under-described languages that are so much the focus of research in UT's Linguistics Department. Selected by Carlota Smith herself and by her longtime friends and colleagues, this book contains her 1980 piece on temporal structures in discourse, her 1986 comparison of the English and French aspectual systems, a 1996 paper on the aspect system in Navajo (an increasingly-endangered language which Smith worked to preserve), and her 1980 and 1993 papers on the child's acquisition of tense and aspect. Smith, who died in 2007, was a trailblazer in her field whose broad interests fed into her scholarly research. She was an avid reader who sought to bring the analytic tools of linguistics to the humanistic study of

literature, by examining the syntactic and pragmatic principles which underlie literary effects. Her research on rhetorical and temporal effects in context was integrated into her last book, *Modes of Discourse* (2003). The current volume of articles covers much of her most fruitful work on the way in which language is used to express time, and will be essential reading for many working and studying in linguistics generally and in semantics particularly.

The shift towards a sociolinguistic approach to the analysis of language in the last few decades has necessitated new definitions for a number of concepts that linguists have taken for granted for a long time. This volume attempts to demystify the important notions of 'text' and 'context' by providing clear definitions and examples within the assumptions of Systemic Functional (SF) linguistics. After a discussion of the role and significance of context by three eminent SF linguists in section one, the influence of context on text is dealt with in section two 'From Context to Language'. Section three 'From Language to Context' considers textual features and their relationship to contextual factors. All the contributors base their analyses on data collected from a variety of spoken and written registers of contemporary English.

Context Counts assembles, for the first time, the work of pre-eminent linguist Robin Tolmach Lakoff. A career that spans some forty years, Lakoff remains one of the most influential linguists of the 20th-century. The early papers show the genesis of Lakoff's inquiry into the relationship of language and social power, ideas later codified in the groundbreaking *Language and Woman's Place* and *Talking Power*. The late papers reflect her continued exposition of power dynamics beyond gender that are established and represented in language. This volume offers a retrospective analysis of Lakoff's work, with each paper preceded by an introduction from a prominent linguist in the field, including both contemporaries and students of Lakoff's work, and further, Lakoff's own conversation with these responses. This engaging and, at times, moving reevaluation pays homage to Lakoff's far-reaching influence upon linguistics, while also serving as an unusual form of autobiography revealing the decades' long evolution of a scholarly career.

Here are the refereed proceedings of the 6th International and Interdisciplinary Conference on Modeling and Using Context. The 42 papers deal with the interdisciplinary topic of modeling and using context from various perspectives, including computer science, artificial intelligence, cognitive science, linguistics, organizational science, philosophy, and psychology. In addition, readers discover applications in areas such as medicine and law.

Healthcare information technologies are now routinely deployed in a variety of healthcare contexts. These contexts differ widely, but the smooth integration of IT systems is crucial, so the design,

implementation, and evaluation of safe, effective, efficient and easy to adopt health informatics involves careful consideration of both human and organizational factors. This book presents the proceedings of the Context Sensitive Health Informatics (CSHI) conference, held in Copenhagen, Denmark, in August 2013. The theme of this year's conference is human and sociotechnical approaches. The Human Factors approach is distinctly design-driven and aims to optimize performance, safety and users' sense of well-being associated with their use of a system through the application of user-centered systems design and evaluation. The papers and presentations included here are grouped under the topics: patients and IT; usability test and evaluation; work tasks and related contexts; human factors and simulation; and context and systems design, and outline theories and models for studying contextual issues and insights related to how health information technologies can be better designed to accommodate different healthcare contexts. Healthcare organizations, health policy makers and regulatory bodies globally are starting to acknowledge this essential role of human and organizational factors for safe and effective health information technology. This book will be of interest to all those involved in improving the quality of healthcare worldwide.
