systems. It includes five warm-ups per reproducible page, answer keys, and suggestions for use.

The Human Body Quick Starts resource book for fourth to ninth grades prepares students for the day's lesson by providing quick starts that focus on vocabulary, identification, and understanding of the human body. This anatomy resource book includes diagrams and features two to four quick starts per page. Mark Twain Media Publishing Company specializes in providing engaging supplemental books and decorative resources to complement middle- and upper-grade classrooms. Designed by leading educators, this product line covers a range of subjects including mathematics, sciences, language arts, social studies, history, government, fine arts, and character.

The Visual Analogy Guides to Human Anatomy & Physiology, 3e is an affordable and effective study aid for students enrolled in an introductory anatomy and physiology sequence of courses. This book uses visual analogies to assist the student in learning the details of human anatomy and physiology. Using these analogies, students can take things they already know from experiences in everyday life and apply them to anatomical structures and physiological concepts with which they are unfamiliar. The study guide offers a variety of learning activities for students such as, labeling diagrams, creating their own drawings, or coloring existing black-and-white illustrations to better understand the material presented.

Connect students in grades 5 and up with science using *Understanding the Human Body*. This 80-page book presents basic information about the complex human body without overwhelming students with medical jargon. It makes the study of the human body even more fascinating with *Far Out Facts*, fun tidbits of information that keep students on their toes. The book includes a number of Web sites that provide students the opportunity to further explore various body systems and concepts. This book supports National Science Education Standards.

This encyclopedia, reflecting one of the fastest growing fields in evolutionary psychology, is a comprehensive examination of the key areas in animal cognition. It will serve as a complementary resource to the handbooks and journals that have emerged in the last decade on this topic, and will be a useful resource for student and researcher alike. With comprehensive coverage of this field, key concepts will be explored. These include social cognition, prey and predator detection, habitat selection, mating and parenting, learning and perception. Attention is also given to animal-human co-evolution and interaction, as well as metacognition and consciousness. Entries are tailored to the importance of the individual topic and the amount of empirical evidence that is available. All entries are under the purview of acknowledged experts in the field.
