It's February 1942. War grips the world. Asian hate runs rampant, and New Orleans is a dangerous place for Chinese-English scientist Thomas Ling as he collides with self-proclaimed psychic Beatrix Patterson. She's a good liar with an excellent memory, which in truth is her only gift—well, that and conning the well-heeled out of their money and secrets. Hired by the US Army to use her connections to expose Nazi saboteurs and sympathizers, Beatrix recruits the reluctant Thomas. Together, they pit their skills against a government conspiracy, terrorist cells, kidnappings, and murderous plots. As Beatrix grapples with the truth of her own past, she must come to terms with her ruse. Exposing the Nazi war machine about to invade the country could cost Beatrix everything she's worked so hard to build. But the information she and Thomas uncover could change the outcome of the war. The question remains: will anyone believe a liar and a suspected traitor?

Philip Newell's comprehensive reference work contains pearls of wisdom which anyone involved in sound recording will

want to apply to their own studio design. He discusses the fundamentals of good studio acoustics and monitoring in an exhaustive yet accessible manner. Recording Studio Design covers the basic principles, their application in practical circumstances, and the reasons for their importance to the daily success of recording studios. All issues are approached from the premise that most readers will be more interested in how these things affect their daily lives rather than wishing to make an in-depth study of pure acoustics. Therefore frequent reference is made to examples of actual studios, their various design problems and solutions. Because of the importance of good acoustics to the success of most studios, and because of the financial burden which failure may impose, getting things right first time is essential. The advice contained in Recording Studio Design offers workable ways to improve the success rate of any studio, large or small.

In this book the authors present several examples of techniques used to overcome the Abby diffraction limit using flat and 3D diffractive optical elements, photonic crystal lenses, photonic jets, and surface plasmon diffractive optics. The structures discussed can be used in the microwave and THz range and also as scaled models for optical frequencies. Such nano-optical microlenses can be integrated, for example, into existing semiconductor heterostructure platforms for next-generation optoelectronic applications. Chapter 1 considers flat diffractive lenses and innovative 3D radiating structures including a conical millimeter-wave Fresnel zone plate (FZP) lens proposed for subwavelength focusing. In chapter 2 the subwavelength focusing properties of diffractive photonic crystal lenses are considered and it is shown that at least three different types of photonic crystal lens are possible. With the aim of achieving subwavelength focusing, in chapter 3 an alternative mechanism to produce photonic jets at Terahertz frequencies (terajets) using 3D dielectric particles of arbitrary size (cuboids) is considered. A scheme to create a 2D "teraknife" using dielectric rods is also discussed. In the final chapter the successful adaptation of free-space 3D binary phase-reversal conical FZPs for operation on surface plasmon-polariton (SPP) waves demonstrates that analogues of Fourier diffractive components can be developed for in-plane SPP 3D optics. Reviewing theory, modelling and experiment, this book will be a valuable resource for students and researchers working on nanophotonics and sub-wavelength focusing and imaging.

Two political strategists offer the tools to become successful in any field, and cover everything from how to present an argument and get the message across to how to compromise and handle negative publicity.

Thomas D. Rossing String instruments are found in almost all musical cultures. Bowed string instruments form the backbone of symphony orchestras, and they are used widely as solo instruments and in chamber music as well. Guitars are used universally in pop music as well as in classical music. The piano is probably the most versatile of all musical instruments, used widely not only in ensemble with other musical instruments but also as a solo instrument and to accompany solo instruments and the human voice. In this book, various authors will discuss the science of plucked, bowed, and hammered string instruments as well as their electronic counterparts. We have tried to tell the fascinating story of scientific research with a minimum of mathematics to maximize the usefulness of the book to performers and instrument builders as well as to

students and researchers in musical acoustics. Sometimes, however, it is difficult to “translate” ideas from the exact mathematical language of science into words alone, so we include some basic mathematical equations to express these ideas. It is impossible to discuss all families of string instruments. Some instruments have been researched much more than others. Hopefully, the discussions in this book will help to encourage further scientific research by both musicians and scientists alike.

1.1 A Brief History of the Science of String Instruments

Quite a number of good histories of acoustics have been written (Lindsay 1966, 1973; Hunt 1992; Beyer 1999), and these histories include musical acoustics.

Poetry. "I am spending my 39th year practicing uncreativity. On Friday, September 1, 2000, I began retyping the day's NEW YORK TIMES word for word, letter for letter, from the upper left hand corner to the lower right hand corner, page by page." With these words, Kenneth Goldsmith embarked upon a project which he termed "uncreative writing", that is: uncreativity as a constraint-based process; uncreativity as a creative practice. By typing page upon page, making no distinction between article, editorial and advertisement, disregarding all typographic and graphical treatments, Goldsmith levels the daily newspaper. DAY is a monument to the ephemeral, comprised of yesterday's news, a fleeting moment concretized, captured, then reframed into the discourse of literature. "When I reach 40, I hope to have cleansed myself of all creativity"-Kenneth Goldsmith.
