advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE

Read Diane McEachern's posts on the Penguin Blog. Protecting our environment is one of the biggest issues facing our planet today. But how do we solve a problem that can seem overwhelming-even hopeless? As Diane MacEachern argues in *Big Green Purse*, the best way to fight the industries that pollute the planet, thereby changing the marketplace forever, is to mobilize the most powerful consumer force in the world-women. MacEachern's message is simple but revolutionary. If women harness the "power of their purse" and intentionally shift their spending money to commodities that have the greatest environmental benefit, they can create a cleaner, greener world. Spirited and informative, this book: - targets twenty commodities-cars, cosmetics, coffee, food, paper products, appliances, cleansers, and more-where women's dollars can make a dramatic difference; - provides easy-to-follow guidelines and lists so women can choose the greenest option regardless of what they're buying, along with recommended companies they should support; - encourages women to spend wisely by explaining what's worth the premium price some green products cost, what's not, and when they shouldn't spend money at all; and - differentiates between products that are actually "green" and those that are simply marketed as "ecofriendly." Whether readers want to start with small changes or are ready to devote the majority of their budget to green products, MacEachern offers concrete and immediate ways that women can take action and make a difference. Empowering and enlightening, *Big Green Purse* will become the "green shopping bible" for women

Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos than ever.

As Toyota skids into an ocean of problems and uncertainty continues in the U.S. automotive industry, Lemon-Aid Used Cars and Trucks 2011-2012 shows buyers how to pick the cheapest and most reliable vehicles from the past 30 years.
