that make the content accessible and easily understandable to students.

Why immunobiology?

Immunology is the study of the immune system - the internal defence reactions that protect the body from invading microorganisms and the diseases they cause.

Download

Ebook

Spectacular advances have been made over the last few decades in understanding how the immune system works. There is no doubt that these advances have been made possible by concentrating research on a few species of animals, most notably mouse and man. The main motivation for studying the human

immunity without  
causing disease.

'Immunobiology' in  
contrast is a broader  
field, encompassing the  
immune systems of all  
animals. It is the study of  
the origins and  
evolution of immune  
systems in general, and  
the underlying role that  
microorganisms play in  
the microorganism n. an  
process. organism too
