Post-Acute and Long-Term Care Management. Post-acute and long-term care can include long-term acute care hospitals, skilled nursing facilities, inpatient rehabilitation facilities, home health agencies, hospice, assisted living facilities, and correctional facilities. Clients/residents in these settings have been hospitalized recently and usually have complex needs, so a person-centered, individualized process to provide care is necessary.

Post-Acute and Long-Term Care Management

The average LOS in an LTACH needs to exceed 25 days, and patients should have the medical necessity requiring an inpatient level of care for all of those days. In contrast, the average LOS at a short-stay acute care hospital is 5 days. LTACHs initially evolved from existing chronic disease and tuberculosis units.

Long-Term Acute Care Hospitals (LTACH) | MCG Health

Long-Term Care Hospitals are health care facilities that admit complex patients with acute care needs for a mean stay duration of 25 days. In-patients in acute care and residents of long-term care, personal care homes, community care homes and assisted living facilities, may identify support person/designated visitor (s). A support person/designated visitor can be a loved one, friend, paid caregiver, or other person of the patient/resident’s choosing.

As more people live longer, the need for quality long-term care for the elderly will increase dramatically. This volume examines the current system of nursing home regulations, and proposes an overhaul to better provide for those confined to such facilities. It determines the need for regulations, and concludes that the present regulatory system is inadequate, stating that what is needed is not more regulation, but better regulation. This long-anticipated study provides a wealth of useful background information, in-depth study, and discussion for nursing home administrators, students, and teachers in the health care field; professionals involved in caring for the elderly; and geriatric specialists.

Among the issues confronting America is long-term care for frail, older persons and others with chronic conditions and functional limitations that limit their ability to care for themselves. Improving the Quality of Long-Term Care takes a comprehensive look at the quality of care and quality of life in long-term care, including nursing homes, home health agencies, residential care facilities, family members and a variety

of others. This book describes the current state of long-term care, identifying problem areas and offering recommendations for federal and state policymakers. Who uses long-term care? How have the characteristics of this population changed over time? What paths do people follow in long term care? The committee provides the latest information on these and other key questions. This book explores strengths and limitations of available data and research literature especially for settings other than nursing homes, on methods to measure, oversee, and improve the quality of long-term care. The committee makes recommendations on setting and enforcing standards of care, strengthening the caregiving workforce, reimbursement issues, and expanding the knowledge base to guide organizational and individual caregivers in improving the quality of care.

An excellent resource for new or seasoned NPs and PAs! The Nurse Practitioner in Long-Term Care addresses the growing trend to utilize the nurse practitioner in the skilled nursing facility (SNF) to manage patients in long-term care and serves as a practical resource for managing those conditions commonly encountered in the geriatric patient. It includes an introduction to nursing homes, medication management, practical health promotion/disease prevention, and management of common clinical conditions specific to the skilled and long term care nursing home settings. It will also address important topics such as elder abuse, legal issues, reimbursement, and regulatory issues. Subjects covered are pertinent to everyday practice and this text is useful in graduate programs for nurse practitioners and clinical nurse specialists as well as for physician's assistant (PA) students.

This book addresses current issues surrounding hospital readmissions and the practice of post-acute and long-term care (LTC). Thoroughly updated, the Second Edition of this practical pocket guide presents new regulations governing these services and lessens the uncertainty involved in caring for patients in a long-term care facility. The book is divided into four sections that cover: types of care, which include community care, nursing facility care, and teamwork; clinical medicine, with suggested approaches to common conditions and wound care; psychosocial aspects of care, which include ethical and legal issues and caring for families; and special issues, with chapters on documentation, coding, and medication management. As community-based care is an area of rapid growth where the elderly are increasingly seeking their medical care, new chapters have also been added that describe these programs. Written by expert contributors, many of whom have worked within the American Medical Directors Association to create and disseminate a knowledge base for post-acute and LTC, this is a valuable resource for clinicians and educators seeking to maximize the care and living experience of residents in post-acute and long-term care settings.

This manual includes JCI's updated requirements for long term care organizations effective 1 July 2012. All of the standards and accreditation policies and procedures are included, giving long term care organizations around the world the information they need to pursue or maintain JCI accreditation and maximize resident-safe care. The manual contains Joint Commission International's (JCI's) standards, intent statements, and measurable elements for long term care organizations, including resident- centered and organizational requirements.

This in-depth reference presents a comprehensive approach to developing a facility-based infection prevention program, including numerous practical tips and clinical advice for successful implementation. Topics addressed include: Regulatory requirements Comprehensive infection prevention risk assessment and program development Surveillance and reporting Nursing assessment and interventions to prevent the most commonly occurring infections in long-term care Environmental cleaning and disinfection Unique long-term care issues such as care transitions and life enrichment activities Occupational health, immunization programs, and staff education Disaster and pandemic preparedness And more Appropriate for all types of long-term care facilities and includes a CD-ROM with customizable forms, helpful tools, and additional resources specific to infection prevention and control.
