As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz -- rich cars, poor quality. There's only one Saturn you should buy. Toyota -- enough apologies: "when you mess up, 'fess up."

Energy Independence is the essential guide to the most viable and affordable alternative energy solutions for the everyday consumer—including solar panels, wind generators, hydrogen fuel cells, wood, hydro-electric, geothermal heat pumps, and more. For all those seeking either to supplement their traditional fuel-burning furnace or to revamp their home, this book has what they need to get started. They'll learn about the most progressive and advanced options as well as tried and true energy conservation techniques. They'll learn how much each method costs, and how quickly they will recoup any investment. Also including a chapter on alternative-fuel cars, this book has been revised and updated with the most recent stats, technology, costs, and advice. It is a must for anyone—urbanite, suburbanite, or rural dweller—who relies on traditional oil-burning sources but has decided it's high time to be proactive both about cutting fuel costs and achieving freedom from fossil fuel dependence.

“ Wonderful . . . a great resource for automobile fans who want to understand science, and vice versa. ” —Alan C. Tribble, author of A Tribble 's Guide to Space For some, driving is an art; for others, it 's a science. At the Isaac Newton School of Driving, though, every car is a laboratory on wheels and every drive an exciting journey into the world of physics. In this book, physics professor Barry Parker—whose father was a car mechanic and garage owner—shows how almost every aspect of driving involves physics. A car's performance and handling relies on concepts such as force, momentum, and energy. Its ignition system depends on the principles of electricity and magnetism. Braking relies on friction—and if the brakes fail, the resulting damage, too, can be predicted using physics. Parker 's first lesson describes the basics: speed and acceleration; why you get thrown forward while braking or outward while turning; and why car advertisements boast about horsepower and torque. He also discusses: the thermodynamics of engines, and how they can be more fuel efficient what friction and traction are and how they keep a car 's tires on the road, whether it's dry, wet, or icy how simple laws of physics enable scientists to design aerodynamic cars and high-tech steering systems the high-performance physics of auto racing how traffic accidents are reconstructed by police how chaos theory helps explain why traffic jams happen what cars of the future might look like, and more “ You don't need to be an engineer to read and enjoy Parker 's often entertaining book...covers everything from the basics of engines and electronics to crashes and congestion. ” —Autoweek

Phil Edmonston, Canada's automotive "Dr. Phil," pulls no punches. He says there's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar and an auto industry offering reduced prices, more cash rebates, low financing rates, bargain leases, and free auto maintenance programs. In this all-new guide he says: Audis are beautiful to behold but hell to own (biodegradable transmissions, "rodent snack" wiring, and mind-boggling depreciation. Many 2011-12 automobiles have "chin-to-chest head restraints, blinding dash reflections, and dash gauges that can't be seen in sunlight, not to mention painful wind-tunnel roar if the rear windows are opened while underway. Ethanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive Engineers. GM's 2012 Volt electric car is a mixture of hype and hypocrisy from the car company that "killed" its own electric car more than a decade ago. You can save \$2,000 by cutting freight fees and "administrative" charges. Diesel annual urea fill-up scams cost you \$300, including an \$80 "handling" charge for \$25 worth of urea. Lemon-Aid's 2011-12 Endangered Species List: the Chinese Volvo, the Indian Jaguar and Land Rover, the Mercedes-Benz Smart Car, Mitsubishi, and Suzuki.
