This fully updated landmark revision guide is a must-have for all surgical trainees working towards the MRCS Part B OSCE.

Over recent years the MRCS viva examination has increasingly made use of radiological imaging to facilitate the discussion of anatomy relevant to surgical practice. It is rare for junior doctors to receive adequate exposure to radiology in their day-to-day surgical practice, which makes preparation for this part of the examination difficult. For many, examinations are stressful. The last thing a candidate needs is to be faced with unfamiliar radiological images. This review of surgically relevant radiological imaging aims to prevent initial uncertainties and will allow candidates to discuss relevant anatomy and score valuable points. An invaluable addition to any revision plan, this title also: • highlights typical anatomy viva questions • familiarizes candidates with a range of images of differing modalities (plain film, fluoroscopy, computed tomography and magnetic resonance imaging) • introduces different planes of imaging, enabling candidates to deal with unusual coronal or sagittal views with confidence • gives concise but detailed notes for quick consultation

This is a fully updated edition of the hugely successful OSCEs for the MRCS Part B: A Bailey and Love Revision Guide. The content has been revised in line with recent changes to the examination, such as the introduction of microbiology and applied surgical sciences and changes from patient safety to clinical and procedural skills.Popular with trainee surgeons preparing for the oral element of the MRCS (the objective structured clinical examination, or OSCE), this revision guide will maximise the chances of success in surgical examinations.

A unique blend of integrated video and book content, How to Operate provides a comprehensive, multimedia training resource for medical students, junior doctors, MRCS candidates and surgeons in training. The three DVDs present over 40 of the most common general, urological, ENT and orthopaedic surgical procedures, complete with step-by-step commentary from experienced surgical consultants. At key points during each procedure, the frame freezes so that anatomical structures and pathology are 'drawn' onto the frame for clarity and to reinforce learning. The 10 hours of video is supported by an accompanying book containing an introduction to each procedure, a thorough explanation of the operation mirroring the video with relevant video stills, and bullet point summaries which can be used as OSCE-style checklists. With a foreword by John Black, President of the Royal College of Surgeons, How to Operate is a truly comprehensive learning resource for all budding surgeons. All you need to become a surgeon is here - scalpel not included!

An A-Z guide covering the essentials of pathology for examination candidates.
