reader through various sampling designs, measurement techniques, and analytical methods required to develop and complete a habitat project, including the creation of a report or management plan. The authors emphasize key management concepts and provide exercises putting ecological principles into practice. Case studies identify emerging issues that are changing and complicating wildlife habitat management. These include large-scale ecological concerns and their social and political challenges—global climate change, the decline in water quality and availability, loss and fragmentation of habitat, broadening invasive species and diseases, increased human-wildlife conflicts, and urbanization. This practical guide is an invaluable reference for students, land managers, and landowners who are developing and implementing management plans for habitat modification and improvement on both private and public lands.

Gathering information from more than five hundred academic sources and the popular media, this book educated us on the complete nature of the problem.
