This text combines the principles and major techniques in computer graphics with state-of-the-art examples that relate to things students and professionals see every day on the Internet and in computer-generated movies. The author has written a highly practical and exceptionally accessible text, thorough and integrated in approach. Concepts are carefully presented, underlying mathematics are explained, and the importance of each concept is highlighted. This book shows the reader how to translate the math into program code and shows the result. This new edition provides readers with the most current information in the field of computer graphics. \*NEW-Uses OpenGL as the supporting software-An appendix explains how to obtain it (free downloads) and how to install it on a wide variety of platforms. \*NEW-Uses C++ as the underlying programming language. Introduces useful classes for graphics but does not force a rigid object-oriented posture. \*NEW-Earlier and more in-depth treatment of 3D graphics and the underlying mathematics. \*NEW-Updates all content to reflect the advances in the field. \*NEW-Extensive case studies at the end of each chapter. graphics. \*NEW-A powerful Scene Design Language (SDL) is introduced and described; C++ code for the SDL interpreter is available on the book's Web site. \*NEW-An Appendix on the PostScript language shows how this powerful page layout language operates. \*Lays out the links between a concept, underlying mathematics, program coding, and the result. \*Includes an abundance of state-of-the-art worked examples. \*Provides a Companion Web site <http://www.prenhall.com/hil>

Provides a valuable overview of human-machine interaction in technological systems, with particular emphasis on recent advances in theory, experimental and analytical research, and applications related to man-machine systems. Topics covered include: Automation and Operator - task analysis, decision support, task allocation, management decision support, supervisory control, artificial intelligence, training and teaching, expert knowledge; System Concept and Design - software ergonomics, fault diagnosis, safety, design concepts; Man-machine Interface - interface design, graphics and vision, user adaptive interfaces; Systems Operation - process industry, electric power, aircraft, surface transport, prostheses and manual control. Contains 53 papers and three discussion sessions.

The Principles-and-Parameters approach to linguistic theory has triggered an enormous amount of work in comparative syntax over the last decade or so. A natural consequence of the growth in synchronic comparative work has been a renewed interest in questions of diachronic syntax, and this collection testifies to that trend. These papers focus on questions of clause structure which have become a central theme of theoretical work since the pioneering work in the late 1980s by Chomsky, Pollock, and others. The languages studied by an international roster of contributors include all the major Romance and Germanic languages. This volume is of central importance for anyone working in theoretical, comparative, or historical syntax.

This book explores English language arts instruction from the perspective of language as "social actions" that students and teachers enact with and toward one another to create supportive, trusting relations between students and teachers, and among students as peers. Departing from a code-based view of language as a set of systems or structures, the perspective of languaging as social actions takes up language as emotive, embodied, and inseparable from the intellectual life of the classroom. Through extensive classroom examples, the book demonstrates how elementary and secondary ELA teachers can apply a languaging perspective. Beach and Beauchemin employ pedagogical cases and activities to illustrate how to enhance students' engagement in open-ended discussions, responses to literature, writing for audiences, drama activities, and online interactions. The authors also offer methods for fostering students' self-reflection to improve their sense of agency associated with enhancing relations in face-to-face, rhetorical, and online contexts.

Through several unique perspectives and contexts, this volume contributes to current understanding of agency in second language learning. It includes chapters discussing theoretical, analytical and pedagogical approaches, and will serve as a key reference for researchers of language learning and teaching.

The study of the linguistic reflexes of aspect has been an active field of research in various sub-disciplines of linguistics, such as syntax, semantics (including discourse theory) and acquisition studies. However, communication and dissemination of results across these various subfields has often been indirect. This volume solves that problem. The different angles brought together here give us a comprehensive picture of the representation of aspect in the mind/brain of the speaker. The papers in this volume represent the results of a workshop on the syntax, semantics and acquisition of aspect held in 2002 whose purpose was to foment active cross-disciplinary communication. A number of the papers examine the syntactic representation of lexical or situation aspect, while others focus on the syntactic interaction of lexical aspect with grammatical aspect, and of grammatical aspect and tense. Other papers examine the role of aspect in discourse representations, while a third group of papers reports on results of empirical studies on the acquisition of aspect in both first and second language acquisition, and patterns of loss of morphosyntactic reflexes of aspect in language attrition. This volume is of interest to researchers and advanced graduate students in syntax, semantics, discourse representation and language acquisition, particularly those
